

Solution Requirements

Date	30/09/2026
Team ID	SWTID-2026-7404
Project Name	PocketSmart AI
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Transaction Management	Add income and expenses with amount, date, note and expense category.	High
2	Budget Management	Maintain a monthly budget goal; default value in the current app is ■ 25,000.	High
3	Dashboard & Analytics	Display income, expense, balance, spending percentage, budget usage and category breakdown.	High
4	Financial Health	Calculate a health score from budget usage, balance and savings rate and show status.	High
5	Recommendations	Generate spending insights based on budget and savings conditions.	Medium
6	History & Search	View transactions in a Treeview with search, type and category filters.	Medium
7	CSV Import/Export	Export transactions to CSV and import CSV containing date, type, category and amount; note is supported when present.	Medium
8	Data Management	Clear stored income, expense and settings data after user confirmation.	Medium

Step 2: Non-Functional Requirements (NFR)

Category	Source-supported requirement
Usability	Desktop GUI with clear sections, buttons, forms, dashboard cards and transaction history.
Maintainability	Functions separate database operations, calculations, recommendation generation and UI construction.
Data Persistence	SQLite is used for income, expenses and settings.
Interoperability	CSV import/export supports transaction data exchange.
