## Technology Stack Details

| S.No | Architecture Component / Layer | Technology Chosen                     | Justification / Purpose                                                                                                                              |
|------|--------------------------------|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Programming Language           | Python                                | The attached app.py is implemented in Python.                                                                                                        |
| 2    | Desktop Frontend / GUI         | Tkinter + ttk                         | Provides the desktop user interface, forms, buttons, comboboxes, progress bar and Treeview.                                                          |
| 3    | Database / Data Storage        | SQLite                                | Stores income, expenses and application settings locally.                                                                                            |
| 4    | Data Exchange                  | Python csv module                     | Implements transaction CSV import and export.                                                                                                        |
| 5    | Charts / Visualization         | Tkinter Canvas                        | Renders the spending donut chart directly in the desktop UI.                                                                                         |
| 6    | Development Environment        | Python virtual environment            | README instructs creating a venv and installing the listed requirements.                                                                             |
| 7    | AI / External Service          | Google Gemini AI (README description) | README describes Gemini AI for tailored budget insights and savings recommendations; the current app.py supplied does not contain a Gemini API call. |
| 8    | Framework note                 | Streamlit (README description)        | README describes the project as Streamlit-based, while the supplied app.py uses Tkinter. This distinction is retained rather than inferred away.     |
