

Proposed Solution

Date	30/09/2026
Team ID	SWTID-2026-7404
Project Name	PocketSmart AI
Maximum Marks	3 Marks

PocketSmart AI is a personal budget planner implemented in the supplied app.py as a Python Tkinter desktop application with SQLite persistence. The README additionally describes an AI-powered assistant using Streamlit and Google Gemini AI. The project documentation keeps both statements explicit because the attached files contain both descriptions.

Core solution capabilities

Capability	Source-supported behavior
Income management	Add positive income amount and note; date is recorded automatically.
Expense management	Select a category, add a positive amount and note; date is recorded automatically.
Budget management	Set and persist a monthly budget goal; current default is ■25,000.
Dashboard	Show income, expense, balance, spending health, budget target/usage and category chart.
Recommendations	Generate insights from spending, budget and savings conditions.
History	Search/filter transactions by text, type and category.
CSV	Export transactions and import validated transaction CSV data.
Data reset	Clear all stored income, expenses and settings after confirmation.
