

Solution Architecture

Date	30/09/2026
Team ID	SWTID-2026-7404
Project Name	PocketSmart AI
Maximum Marks	3 Marks

Layer	Components	Responsibilities
Presentation / GUI	Tkinter, ttk, Tkinter Canvas	Forms, dashboard, buttons, progress indicators, chart and transaction history.
Application Logic	Python functions in app.py	Input validation, calculations, budget handling, recommendations, filters and UI updates.
Data Layer	SQLite via sqlite3	Persist income, expenses and settings.
Data Exchange	Python csv module	Import and export transaction records.

Request / Data Flow

User → Tkinter interface → validation / calculation functions → SQLite or CSV operations → dashboard refresh. The recommendation and health-score functions consume calculated income, expense and budget values.
